Provider Name: _____	Phone: _____	
Provider Address: _____	Fax: _____	
Pharmacy Name: _____	Rx Address: _____	Rx phone: _____
Provider must fill all information above. It must be legible, correct and complete or form will be returned.		
(Pharmacy use only): NPI: NABP: NDC:		

- MaineCare will approve Synagis® PA requests for infants who meet the following guidelines. PA requests will be approved starting at the onset of RSV season for a maximum of 5 doses and a dosing interval not less than 30 days between injections. For MaineCare members, PA requests will be accepted starting November 8, 2019 for dates of service starting December 2, 2019. Synagis® will not be authorized for administration prior to this date. Synagis® dosing authorizations will extend for the recommended number of doses or until the end of epidemic RSV season as defined by CDC - whichever occurs first. Monthly prophylaxis should be discontinued for any infant or young child who experiences a breakthrough RSV hospitalization.

Drug Name	Strength	Weight (kg)	Dosage Instructions	Quantity	Days Supply
Synagis®	<input type="checkbox"/> 50mg <input type="checkbox"/> 100mg	_____	_____	_____	30

Medical Necessity Documentation (Please check one of the following):

- Infants who are 12 months of age or younger with **chronic lung disease (CLD)** of prematurity, defined as born at ≤ 32 weeks, 0 days AND a requirement for > 21% oxygen for at least the first 28 days after birth
- Infants who are 12 months of age or younger, born prior to 35 weeks, 0 days AND who required intensive pulmonary services during the neonatal period AND continue to require chronic medication therapy for their neonatal based pulmonary issues.
- Infants who are 24 months of age or younger who meet the above criteria for CLD AND who **currently require or have required medical therapy** (oxygen, diuretics, corticosteroids) within 6 months of the start of the RSV season.
- Infants who are 12 months of age or younger with **hemodynamically significant congenital heart disease** and have one or more of the following:
 - a. Acyanotic heart disease AND will require surgery
 - b. Moderate to severe pulmonary hypertension
 - c. Cyanotic heart disease with palivizumab prophylaxis recommended by a pediatric cardiologist
- Infants who are 12 months of age or younger at the start of the RSV season **born at ≤ 28 weeks, 6 days gestational age.**

- Infants who are 12 months of age or younger at the start of RSV season and have either severe neuromuscular disease or congenital abnormalities, either of which compromise handling of respiratory secretions.
- Infants who are less than 24 months at the start of RSV season who have profound immunocompromised (e.g. receiving chemotherapy, recipients of solid organ transplants or hematopoietic stem cell transplants)
- Infants less than 12 months of age or younger at the start of the RSV season with cystic fibrosis AND with clinical evidence of CLD and/or nutritional compromise
- Infants age 12-24 months of age at the start of the RSV season with cystic fibrosis and manifestations of severe lung disease (previous hospitalization for pulmonary exacerbation in the first year or abnormalities on chest radiography or CT, that persist when stable) or weight for length less than the 10th percentile.
- Other: _____
